Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 16-29 and 45-58, drawn to mobile initiated handoff from a cellular connection to a local wireless connection, classified in class 455, subclass 437.
- II. Claims 1-15 and 30-44, drawn to network initiated handoff from a cellular connection to a local wireless connection, classified in class 455, subclass 438.

The inventions are distinct, each from the other because of the following reasons:

1. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case **Invention I**: is a method and system for handing off a call from a cellular connection to a local wireless connection initiated by the mobile station. **Invention II**: is a method and system for handing off a call from a cellular connection to a local wireless connection initiated by a wireless switch, i.e. serving site initiated.
2. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
